**DETAILED ACTION**

***Claim Rejections - 35 USC § 101***

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 12-13 are rejected under 35 U.S.C. 101 because:

The claimed invention is directed to non-statutory subject matter. Claims 12 and 13 are drawn to functional descriptive material NOT claimed as residing on a computer readable medium. MPEP 2106.IV.B.1(a) (Functional Descriptive Material) states:

“Data structures not claimed as embodied in a computer-readable medium are descriptive material per se and are not statutory because they are not capable of causing functional change in the computer.”

“Such claimed data structures do not define any structural or functional interrelationships between the data structure and other claimed aspects of the invention which permit the data structure’s functionality to be realized.”

Claims 12 and 13 define a computer program product further defining only a computer program and do not define a computer program embodied on a “computer-readable medium” and are thus non-statutory for that reasons. A computer program (product) can range from paper on

which the program is written, to a program simply contemplated and memorized by a person. The examiner suggests amending the claim to embody the program on “computer-readable medium” in order to make the claim statutory. Examiner suggests the limitation be “A computer program product comprising a computer readable storage medium encoded with a computer program....”

*Claim Rejections - 35 USC § 102*

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Bellegarda et al., U.S. Patent No. 5,544,257.

Bellegarda discloses selecting a plurality of initial classifier models from a set of available classifier models (col. 11, lines 55-60; figure 5, element 510 – selecting the classifier model (here Markov model) from the available models and then selecting another model once done with previous model);

producing an optimal representative classifier for each classifier model according to an iterative optimization routine (col. 11, lines 60-65 – modeling component 208 calculates probability which step further includes updating (optimizing) the model parameters according to an iterative updating routine (col. 10, lines 25-67);

Art Unit: 2624

accepting the representative classifier having a best associated value for a fitness function (col. 12, lines 23-26- accepting the model which yielded the highest probability where the probability value being the associated value for a fitness function).

Regarding claim 12, the subject matter of claim 12 has been similarly analyzed and rejected as per claim 1.

5. Claims 2-6 and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
